DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 – 5, 7 – 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ito et al. (6,249,740).

As to claim 1, Ito shows a navigation system that has a transceiver 108, a display unit 106, an input unit 105, and an ECU 101. Ito's system requests an optimum path or shortcut path data (col 11, line 38 – 41) over a wireless network (Fig. 1). Said path data includes deviation-expected paths (col 22, line 20 – 28) calculated from a plurality of deviation points (col 25, line 3 – 5).

As to claim 2, Ito further shows a device for measuring the current position of the vehicle 104.

As to claim 3, Ito further shows both a video display 106, and a voice output unit 107.

As to claim 4, Ito further shows the ECU determining whether any of the deviation expected paths includes the current position (col 25, line 52 – 55).

As to claim 5, Ito further shows a memory 103 that stores all data and can transmit to any component of the system.

As to claim 7, Ito further shows a method for navigating a mobile object (col 2, line 63) traveling from a departure point and destination (col 11, line 40 – 41), comprising the steps of transmitting a signal 108 requesting a path data from departure point to destination, receiving path data via a wireless network (Fig. 1), displaying 106 navigation path from path data, precalculating deviation expected path data (col 22, line 20 – 28), selecting revised path data among deviation expected path data in case mobile object deviates from navigation path (col 22, line 16 – 22), and displaying revised navigation path (col 22, line 3).

As to claim 8, Ito further shows detecting the present position of the mobile object 104.

As to claim 9, Ito further shows that both navigation path and revised path can be outputted in either audio 107, or video 106.

As to claim 10, Ito further shows that the revised path is selected by determining which of the deviation path includes the present position (col 25, line 52 – 55).

As to claim 11, Ito further shows that all path data is stored in a memory
103.

Response to Arguments

3. Applicant's arguments with respect to claims 1-5 and 7-11 have been considered but are moot in view of the new ground(s) of rejection.
